ALZUAI – *Adaptive Learning Zone Using Artificial Intelligence*

This form was created to determine the usefulness of ALZUAI, a system that uses existing smart devices to provide a seamless, holistic monitoring and response framework for individuals with Alzheimer's Disease/Dementia. Will an AI-based adaptive environment improve incident response time and improve overall caregiver intervention?

Please answer the following questions as accurately and honestly as possible. Thank you for your input.

- Aretha

1. **What type of facility do you work in?**

Mark only one oval.

- Nursing home
- Assisted living
- Memory care unit
- Home care

2. **How many Alzheimer's/dementia patients do you typically oversee per shift?**

Mark only one oval.

- 1 - 10
- 10 - 20
- 20 +

3. **What is your role?**

Mark only one oval.

- CNA
- RN/LPN
- Care aide
- Supervisor
- Other: _____

4. **What shift do you typically work?**

Mark only one oval.

- Day
- Evening
- Night

Patient Monitoring & Baseline Behavior

5. **How are patient behaviors currently monitored?**

Mark only one oval.

- Paper logs
- Digital system
- Verbal reporting
- No formal system

6. **How often are patient behaviors documented?**

Mark only one oval.

- Real-time/Immediately
- End of shift
- Only when incidents occur

7. **Do patients have individualized care plans with known triggers?**

Mark only one oval.

- Yes
- No
- Sometimes

8. **What are the most common behavioral symptoms you observe? (Select all that apply)**

Check all that apply.

- [ ] Wandering
- [ ] Aggression
- [ ] Confusion/disorientation
- [ ] Repetitive questioning
- [ ] Sleep disturbances
- [ ] Refusal of care
- [ ] Other: _____

Incident Tracking

9. **What types of incidents do you track? (Select all that apply)**

Check all that apply.

- [ ] Falls
- [ ] Wandering/elopement
- [ ] Aggressive behavior
- [ ] Medical emergencies
- [ ] Medication refusal
- [ ] Other: _____

10. **How is an incident currently recorded?**

Mark only one oval.

- ( ) Paper report
- ( ) Digital system
- ( ) Verbal only
- ( ) Not consistently recorded

11. **What information is typically recorded? (Select all that apply)**

Check all that apply.

- [ ] Time of incident
- [ ] Location
- [ ] Staff present
- [ ] Patient condition
- [ ] Trigger/cause
- [ ] Response taken
- [ ] Outcome

Response Time & Actions

12. **How quickly are incidents typically responded to?**

Mark only one oval.

- Immediately (within 1 minute)
- 1–5 minutes
- 5–10 minutes
- 10+ minutes

13. **What factors delay response time? (Select all that apply)**

Check all that apply.

- [ ] Staffing shortages
- [ ] Lack of alerts/notifications
- [ ] Poor communication
- [ ] Unclear responsibility
- [ ] Physical layout of facility
- [ ] Other: _____

14. **What actions are typically taken after an incident?**

Mark only one oval.

- De-escalation techniques
- Medication
- Physical assistance
- Notify supervisor/family
- Documentation only

15. **Is response effectiveness tracked?**

Mark only one oval.

- Yes
- No
- Sometimes

Communication & Alerts

16. **How are caregivers notified of incidents or risks?**

Mark only one oval.

- Verbal
- Call system
- Mobile device/app
- Alarm system
- Not consistently

17. **Would real-time alerts improve response time?**

Mark only one oval.

- Yes
- No
- Unsure

18. **What type of alerts would be most useful? (Select all that apply)**

Check all that apply.

- [ ] Fall detection
- [ ] Wandering alerts
- [ ] Behavioral escalation warnings
- [ ] Medication reminders
- [ ] Location tracking

Data & Adaptive Learning Needs

19. **Would it be helpful if the system identified patterns in patient behavior?**

Mark only one oval.

- ( ) Yes
- ( ) No
- ( ) Maybe

20. **What patterns would be most useful to detect? (Select all that apply)**

Check all that apply.

- [ ] Time-of-day behaviors
- [ ] Trigger events
- [ ] Escalation sequences
- [ ] Response effectiveness
- [ ] Staff workload impact

21. **Would predictive alerts (before an incident occurs) be valuable?**

Mark only one oval.

- Yes
- No
- Unsure

22. **What data would you be comfortable collecting? (Select all that apply)**

Check all that apply.

- [ ] Patient movement/location
- [ ] Behavioral logs
- [ ] Vital signs
- [ ] Audio/video monitoring
- [ ] Staff response times

Usability & System Design

23. **What device would you prefer for reporting incidents?**

Mark only one oval.

- Mobile phone
- Tablet
- Desktop
- Wearable device

24. **How much time can you realistically spend logging an incident?**

Mark only one oval.

- < 30 seconds
- 1–5 minutes
- 5+ minutes
- Voice input
- Pre-filled forms
- Auto-detection of incidents
- Minimal typing
- Integration with existing systems

Challenges & Opportunities

25. **What is the biggest challenge in managing Alzheimer's patient incidents?**

26. **What information do you wish you had in real-time but currently don't?**

27. **Describe a recent incident that could have been handled better with more data or faster alerts.**

28. **What features would make you trust and rely on an adaptive system?**

29. **Any concerns about privacy, monitoring, or data collection?**
